## Repeated Interactions: unitäre Kollisionen + partielle Spur

$\omega$  (System)

1.00

$\beta$  (Bad)

2.00

Kopplung  $g$

0.50

Pulsdauer  $\tau_{\text{int}}$

0.20

Kollisionsintervall  $\Delta t$

0.20

Anzahl Kollisionen

60

$\theta$  (Startzustand)

1.05

$\phi$  (Startzustand)

0.00

Run micro trace-out

Ancilla thermal:  $p_{\text{exc}} \approx 0.1192$ ,  $p_{\text{gnd}} \approx 0.8808$  (KMS:  $p_{\text{exc}}/p_{\text{gnd}} = e^{(-\beta\omega)}$ )

Raten (aus Mikro):  $\gamma_{\downarrow} \approx 0.04389$ ,  $\gamma_{\uparrow} \approx 0.00594$

KMS-Check:  $\gamma_{\uparrow}/\gamma_{\downarrow} - e^{(-\beta\omega)} \approx 2.776e-17$

PSD(last)=True, Tr≈1.000000

> Supplement (Tab 1: Micro → Raten, KMS)

Collision-Map & partielle Spur

$$\rho'_S = \text{Tr}_B [U (\rho_S \otimes \tau_B) U^\dagger]$$

$$U = e^{-i\theta(\sigma_+ \otimes \sigma_- + \sigma_- \otimes \sigma_+)}$$

Thermischer Ancilla-Zustand (KMS)

$$\tau_B = \frac{e^{-\beta(\omega/2)\sigma_z}}{\text{Tr} e^{-\beta(\omega/2)\sigma_z}} = \text{diag}(p_{\text{exc}}, p_{\text{gnd}})$$

$$\frac{p_{\text{exc}}}{p_{\text{gnd}}} = e^{-\beta\omega}$$

Raten im kleinen Winkel

$$\gamma_\downarrow = \frac{\sin^2 \theta}{\Delta t} p_{\text{gnd}}, \quad \gamma_\uparrow = \frac{\sin^2 \theta}{\Delta t} p_{\text{exc}}.$$
